ReliaGear lighting panelboards

Applications

Standards

All ABB lighting panelboards meet the latest revision of the following standards.

- National Electrical Code-Ref. Article 384
- UL67 panelboards: UL50 cabinets and boxes
UL943 GFCI
- UL489 molded case circuit breakers
- cULus listing for ReliaGear lighting panelboards
- cULus listing for ReliaGear non-service entrance panelboards
- International Building Code Seismic Certification
- California Building Code Seismic Certification
- NEMA PB1
- Federal Specifications
 - Panelboards, W-P-115c
 - Type 1—Circuit breaker equipped
 - Class 1—Panelboards
 - Class 2—Load centers
 - Molded case circuit breakers, WC-375B/GEN

Application

The following classifications and limitations of panelboards have been established by the Underwriters Laboratories and the National Electrical Code. Note— “an overcurrent protective device is a circuit breaker pole or single fuse”. Panelboards have no fire wall ratings. All 50/60 Hz rated. There is no limitation as to the number and rating of branch circuits, except as determined by available enclosures.

Interrupting ratings—circuit breakers

Panelboards have integrated short circuit ratings. When fully rated, the rating is that of the lowest rated device in the panelboard. When series connected rated, the rating is that of the main device in panel (or remote line side protected device) and branch-tested/UL Listed combination.

Short-circuit ratings—fusible switch units

The interrupting rating of the fuse must equal or exceed the short-circuit rating of the switch. If it is lower, then the interrupting rating of the switch is the same as the fuse. Switches have no short-circuit rating if renewable fuses are used.

Seismic ratings

All ReliaGear Lighting Panelboards have been tested and certified to meet the the seismic requirements of 2018 International Building Code (IBC) as well as the 2019 California Building Code (CBC)

Selective coordination

NFPA 70, the National Electrical Code (NEC), requires overcurrent devices to be selectively coordinated when applied in emergency standby systems (Article 700), legally required standby systems (Article 701), Critical Power Systems (Article 708) and when supplying multiple elevator circuits (620.62). The NEC defines the performance standard of selective coordination in Article 100, Definitions. Beginning with the definition in effect with the 2014 NEC, the

combinations of circuit breakers that can comply with this standard are limited. Those limitations include the number of circuit breaker poles, current ratings of either the line side or load side circuit breaker, and the maximum interrupting current that selective operation extends to. These limitations can affect the selection of circuit breakers used in a panelboard. ABB has documented selective pairs of their molded case circuit breakers in publication 1SDC210066D0201. This publication should be consulted when applying panelboards in the applications noted above.

Features

- Symmetrical design, no required top or bottom mountings
- Wide, easy-to-install galvanized enclosures with removable endwalls
- Flush or surface mounting for NEMA Type 1 enclosures
- Standard concealed mounting hardware and hinges
- Interiors that allow “straight-in” wiring
- Split neutral for 400A and higher panelboards
- Branch-bus direct connection
- Captive hardware on branch circuit breakers
- Short circuit ratings allow up to 100KA @ 480Y/277Vac; 200KA @ 240Vac (depending on type of panelboard)
- Main bus ratings of 125 to 800 amps copper, 125 to 600 amps aluminum
- Tmax XT vertically mounted main circuit breakers with fixed thermal magnetic and adjustable trip units available
- Bus-connected SPD for maximum surge protection
- Optional door-in-door or front-hinged-to-box door
- Enclosures available in NEMA Type 1, Type 3R/12, Type 4/4X painted galvalume or 316 grade stainless steel
- Optional metering features
- Front options: stainless steel front
- Latch/lock options: best lock, national lock/corbin 60 key, corbin latch bolt 15767, yale lock, replacement locks

ReliaGear lighting panelboards

Types

Type RL

Service information:

1P, 3W-120/240 Vac
 3P, 3W-240 Vac
 3P, 4W-240/120 Vac, 208/120 Vac
 Fully rated: 65kAIC at 240V
 Series rated: 200kAIC at 240V

Main circuit breakers:

100A-THQB, THHQB, TEY
 125A-XT1
 225A-A2
 250A-XT4
 400A-XT5
 600A-XT5
 800A-XT6

Main lug:

125-800A

Branch circuit breakers (plug-in):

Amperage-15-100A
 Poles-1, 2, 3
 Types-THQL, THHQL, TXQL

Subfeeds:

Amperage-15-600A
 Poles-2, 3
 Types- A2, XT1, XT4, XT5

Enclosures

Height-25.5, 31.5, 37.5, 43.5, 49.5, 55.5, 64.5, 76.5, 82.5, 88.5

¹Kit contains 3pcs lug

²External solution: lugs to be mounted on EF terminals supplied in the kit

³The lug kit will come with 2 sets of cable set screws. One is for 600 MCM and smaller cable and the other is for cable greater than 600 MCM. Follow the instructions that are included with the kit. If you are upgrading the existing lugs to the 750 MCM lugs, the customer, AHJ (authority having jurisdiction) and/or inspector will need to make sure the panel is compliant with NEC and UL cable bending space. ABB is not responsible for the addition of these lugs in existing panels.

ReliaGear lighting panelboards

Pricing and ordering through empower, distributors or sales

Information required to price and order a panelboard

- Short-circuit rating (10kA, 18kA, etc.)
- Service entrance label (Yes) or (No)
- Service (3-ph, 4-w 208Y/120; 3-ph, 3-w 480 volts, etc.)
- Entrance of incoming line (top) or (bottom).
(Bottom supplied as standard)
- Trim (surface) or (flush)
- Incoming wire size (500kcmil, 250kcmil, etc.)
- Incoming number of wires per phase (1, 2, 3, etc.)
- Wire material (copper or aluminum)
- Main type (main lugs only, circuit breaker, fusible switch, etc.)
- Amperage of main bus
- Frame of main circuit breaker (XT5, XT6, etc.)
(if applicable)
- Options to mains (shunt trip, lighting contactor, etc.)
- Equipment ground (optional)
- Branches
 - Amp rating (20, 30, 50, etc.)
 - Poles (1, 2, or 3)
 - Frame (THQB, TEY, etc.)
 - Quantity (1, 10, 15, etc.)
- Options:
 - Interior (copper bus, 200% rated neutral, etc.)
 - Box (painted, increased gutter, etc.)
 - Front (door in door, etc.)
 - Ground fault protection (yes) or (no)
- Type of panel (RQ, RE, etc.)

Pricing and layout for factory assembled and unassembled panelboards through empower.

<https://electrification.us.abb.com/geempower>

How to select a ReliaGear Pro-Stock, unassembled panelboard

Total the following components:

- Interior
- Box (add ground bars as required)
- Front
- Main circuit breaker or lug kit
- Subfeed circuit breaker or feed thru lug kit (if required)
- Branch circuit breakers (from section 3)
- Accessories (200% neutral, service entrance etc.)

Please consult your local distributor for net pricing and current stock levels.

For additional details on selecting ReliaGear Pro-Stock panelboards, please refer to publication 1TQC173600E0001.

ReliaGear lighting panelboards

Pro-Stock, unassembled lighting panels

100-600A (600A main circuit breaker not available)

240 Vac 1 or 3 phase or 480y/277 vac 3 phase

Order by product number from the customer service center

1. Select interior

Select the interior by bus type, panel rating and number of circuits.
Identify the box/front height for use in Steps 2 and 3.

(T) Fronts with quarter turn lock for applications with XT5 circuit breakers. Applicable for NEMA 1 enclosures only.

ReliaGear lighting panelboards

Pro-Stock, unassembled lighting panels

4. Select main and/or sub-feed circuit breaker kit

Select main circuit breaker kit appropriate for your interior type (see Step 1), amp rating and kAIC rating.
If a sub-feed circuit breaker is required, repeat the selection process.

Note: 400A circuit breaker kits cannot be used for sub-feed applications in Pro-Stock panelboards.

For additional details, see Section 6 of the BuyLog.

¹ Circuit breaker not included except for "WB" kits (where product number ends in "WB"). "WB" kits include a circuit breaker, mounting kit and load-side lugs.

² Actual Circuit breaker Short Circuit Rating is 25kAIC

³ Use 2 outer poles for 3 pole applications.

⁴ Can use (2) 3 pole devices only, no 2 pole allowed

⁵ For Subfeed application only

⁶ 6 poles of subfeed applies only to 400A and 600A interiors.

⁷ Only compatible with standard fronts with a quarter turn lock. Order front part number with suffix "T" at the end of the SKU.

ReliaGear lighting panelboards

Pro-Stock, unassembled lighting panels

5. Typical main circuit breakers

- Skip Step 5 if you selected a main circuit breaker kit ending in “WB” —no circuit breaker is required.
- To correlate circuit breaker types with the kAIC rating in specific panelboards, see the table for Step 4. For more rating details, see ReliaGear Lighting Panels Rating Series Labels (1TQC173100E0001).
- Use 2 outer poles for 3 pole applications
- For TEY and THQB main circuit breakers, see branch circuit breakers tables in Step 7.

Tmax XT Circuit breakers (3-pole) For use with appropriate main circuit breaker kit (see Step 4).

ReliaGear lighting panelboards

Branch circuit monitoring

The Branch Circuit Monitoring (BCM) unit provides a cost-effective integrated solution for ReliaGear Lighting Panelboard power monitoring and submetering applications. With exceptional performance, the BCM unit monitors key electrical parameters of the main circuit and various branch circuits coming into the panelboard. This information can be transmitted via the RS-485 communication system in order to analyze usage and identify potential cost saving measures and improve load management. Offering IEC Class 1 revenue grade metering accuracy, the revenue grade BCM meter can be used for tenant billing and cost allocation.

Features

- Solutions up to 800A
- IEC Class 1 revenue grade metering accuracy
- Offers Solid Core or Split Core BCM selection process
- Monitor up to 50 panelboards on one RS-485 drop
- Reports volts, amps, power, and energy for each circuit
- Solid Core monitors 42 circuits (and optional mains)
- Split Core monitors up to 66 circuits (and optional mains) configurable alarm thresholds improve load management
- Ability to set the orientation and numbering of the circuits
- 1/4 to 125¹ Amp monitoring – the widest range available
- 1-, 2-, 3-pole circuit breaker support
- 5-year warranty
- Modbus RTU via RS485 communications

¹ Must use Split Core BCM for 110A and 125A monitoring.
Solid Core available for 42 circuits only, 100A max.
Split Core available up to 66 circuits max. and up to 125A max.

ReliaGear lighting panelboards

AMP1 integrated power and energy

The AMP1 Power & Energy Meter provides a cost-effective integrated solution for ReliaGear Lighting panelboard power monitoring and submetering applications. With exceptional performance, the AMP1 monitors key electrical parameters of the main power coming into the panelboard. This information can then be transmitted to a building automation system (BAS), or similar system, to analyze usage and identify potential cost saving measures. Offering ANSI 12.20 0.5% accuracy, the revenue grade AMP1 meter can be used for tenant billing and cost allocation.

Features

- Solutions up to 800A
- Revenue Grade, ANSI 12.20 0.2% accuracy
- Monitors voltage, amperage, power, and energy
- Backlit LCD Display
- Data logging option to ensure data is still preserved locally
- Communicates via Modbus RTU or BACnet – Versatile and widely used protocols.
- User-enabled password protection
- UL-67 approved
- 5-Year warranty
- Earn points towards LEED Certification

ReliaGear lighting panelboards

Title 24 solutions

California's Title 24, Part 6, Building Energy Efficiency Standards, §130.5(b) requires electrical systems are to be arranged to allow metering of electrical loads by load type or other classifications. While the meters themselves do not need to be installed, electrical equipment that is an intended location for this metering must be able to allow future current and voltage sensing. Section 130.5(b) applies to new electrical system installations or when complete electrical systems are replaced. The requirement does not apply to modifications made in existing electrical systems, such as adding a new circuit breaker to an electrical panel

Branch Circuit Monitoring (BCM) upgradable panels are a practical, cost effective way to meet Title 24 Part 6 §130.5(b) requirements. This method provides freedom to place branch devices anywhere in a panel regardless of load type. This means that panels can be installed with less labor since there is no further time dedicated to validating the construction of a complex layout.

Branch Circuit Monitoring (BCM) upgradable panelboards allow the ability to meter each branch circuit individually without the complexity and cost of physically grouping similar branch devices together within the panel. Title 24 compliance can be attained with BCM upgradable panels no matter where a branch device is located in the panel, provided a single load type is wired per branch. The BCM upgradable panelboards provide more installation flexibility and better density per panel than disaggregated load monitoring. The field upgrade kit can be installed after the panel is commissioned. The kit includes a meter and split core CTs. BCM upgradable panels retain density and flexibility when adding additional branch devices regardless if metering has been implemented.

Split bus panels are another cost-effective solution for disaggregating multiple type of loads that can be metered separately in the future using additive/subtractive current transformer wiring techniques. Up to seven sections can be configured in the panel, with space in between each section for future CTs. The quantity of the branches in each section is flexible and can be any multiple of six 1-pole branches. The accurate and inexpensive AMP1 meter can be used for the future metering, which must be separately mounted.

Split bus configurations

- Incoming type:
Lighting contactor, main lug or main breaker
- Panelboard selections
 - RQ/RL up to 225A main breaker or main lug, max 22 KAIC at 240V
 - RE up to 125A main breaker or 225A main lug, max 18 KAIC at 480V
- Main breakers:
Formula A2, XT1, THQB, TEY, TEY(D/H/L)
Feeders: THQB, TEY
- Sub-feeds:
Formula A2, THQB, TEY, TEY(D/H/L) TED, XT1 Max rating of 22 KAIC at 240V and 208/120V and 18 KAIC @480V.
- 9 configurations available in empower

Split Bus

Features

- Solutions up to 800A
- Offers 3 solutions: BCM upgradable panels, field upgrade kits or split bus panels
- 1, 2, 3 pole circuit breaker support

ReliaGear neXT panelboards

Applications

Standards

All ABB power panelboards meet the latest revision of the following standards.

- National Electrical Code-Ref. Article 384
- UL67 panelboards: UL50 cabinets and boxes UL943 GFCI
- UL489 molded case circuit breakers
- cUL listing
- International Building Code Seismic Certification
- NEMA PB1

Application

The following classifications and limitations of panelboards have been established by the Underwriters Laboratories and the National Electrical Code. Note— “an overcurrent protective device is a circuit breaker pole or single fuse”. Panelboards have no fire wall ratings. All 50/60 Hz rated. There is no limitation as to the number and rating of branch circuits, except as determined by available enclosures.

Interrupting ratings—circuit breakers

Panelboards have integrated short circuit ratings. When fully rated, the rating is that of the lowest rated device in the panelboard. When series connected rated, the rating is that of the main device in panel (or remote line side protected device) and branch-tested/UL Listed combination.

Short-circuit ratings—fusible switch units

The interrupting rating of the fuse must equal or exceed the short-circuit rating of the switch. If it is lower, then the interrupting rating of the switch is the same as the fuse. Switches have no short-circuit rating if renewable fuses are used.

Seismic ratings

All ReliaGear neXT and Spectra™ Panelboards have been tested and certified to meet the the seismic requirements of International Building Code (IBC)

Selective coordination

NFPA 70, the National Electrical Code (NEC), requires overcurrent devices to be selectively coordinated when applied in emergency standby systems (Article 700), legally required standby systems (Article 701), Critical Power Systems (Article 708) and when supplying multiple elevator circuits (620.62). The NEC defines the performance standard of selective coordination in Article 100, Definitions. Beginning with the definition in effect with the 2014 NEC, the combinations of circuit breakers that can comply with this standard are limited. Those limitations include the number of circuit breaker poles, current ratings of either the line side or load side circuit breaker, and the maximum interrupting current that selective operation extends to. These limitations can affect the selection of circuit breakers used in a panelboard. ABB has documented selective pairs of their molded case circuit breakers in publication 1SDC210066D0201. This publication should be consulted when applying panelboards in the applications noted above.

ReliaGear neXT

ReliaGear neXT features

- Completely field modifiable
- Quick connect component design that creates fast and secure connection
- IP20 interior features
- Factory assembled interior and bulk pack interior options
- Tmax XT vertically mounted main circuit breakers with fixed thermal magnetic and adjustable trip units available
- ABB Ability™

Service information:

240 V AC; 3-phase, 3-wire
 240/120 V AC Delta Hi-Leg; 3-phase, 4-wire
 480 V AC; 3-phase, 3-wire
 600 V AC; 3-phase, 3-wire
 208Y/120 V AC; 3-phase, 4-wire
 480Y/277 V AC; 3-phase, 4-wire
 600Y/347 V AC; 3-phase, 4-wire
 Fully rated: 100KAIC at 480/277Vac
 Fully rated: 65kA at 600Vac

Main circuit breakers:

250A-XT4
 600A-XT5
 1200A-XT7

Main lug:

250A - 1200A

Branch circuit breakers (plug-in):

Amperage-15-1200A
 Poles-1, 2, 3
 Types- Tmax XT1, XT4, XT5, XT6, XT7, Record Plus FB,
 TEY and Formula A2

Enclosures

Heights - 60", 72", 84", 96"
 Widths - 30", 40", 45"
 Depths - 10.8" for NEMA 1 and 14.5" for all other NEMA types

Features

- Main bus is IP20 compliant, 250-1200 amp, copper or aluminum
- Enclosures available in NEMA Type 1, Type 3R/12, Type 4/4X
- 3 box widths simplify installation and design
- Panelboard is modular and completely field modifiable
- Hinged gutter covers standard for easy access to wire way
- Circuit breakers have small form factor and enable increased density within the panelboard
- Circuit breakers and accessories plug in quickly with line side connector and secure with bolted connection.
- Vertically mounted main circuit breakers available
- Captive hardware on branch circuit breakers
- Front accessible main lug assembly
- 100% rated circuit breakers available
- Individual circuit breaker cover plates

ReliaGear neXT panelboards

Pricing and ordering through empower, distributors or sales

Information required to price and order a panelboard

- Short-circuit rating (KAIC)
- Service entrance (Yes) or (No)
- Mark(s) (LPA, MDP, RPC, etc.)
- Service (3-ph, 4-w 600 volts; 3-ph, 3-w 480 volts, etc.)
- Entrance of incoming line (top) or (bottom)
- Interiors can arrive assembled (Factory Assembled) or can be assembled on the job site (Bulk Pack). Bulk Pack is the default.
- Incoming wire size (500kcmil, 750 kcmil, etc.)
- Incoming number of wires per phase (1, 2, 3, etc.)
- Wire material (copper or aluminum)
- Main type (main lugs only, circuit breaker, fusible switch, etc.)
- Amperage of main bus
- Frame of main circuit breaker (XT5, XT6, etc.) (if applicable)
- Main circuit breaker options (shunt trip, pad lock, etc.)
- ABB Ability (EKIP signaling and Cloud gateway)
- Equipment ground (optional)
- Branches
 - Amp rating (20, 30, 50, etc.)
 - Poles (1, 2, or 3)
 - Frame (FB, TEY, A2, XT1, XT4, XT5, XT6, XT7)
 - Quantity (1, 10, 15, etc.)
- Options:
 - Interior (bus material, neutral rating, etc.)
 - Front (door in door, etc.)
 - Ground fault protection (yes) or (no)
- Type of panel (ReliaGear neXT, Spectra ADS, etc.)

Pricing and layout for factory assembled and unassembled panelboards through empower.

- Collect the information required to price and order a panelboard
- Have your distributor, sales or customer service contact visit empower.abb.com to configure.
- Configure and price your power panel
- View Bill of Material, Drawing, and relevant submittals documentation
- Select factory assembled or bulk pack interiors before creating your new order
- For additional details on selecting ReliaGear next panelboards, please refer to publication 1SQC900001C0201.

ReliaGear neXT panelboards

Pricing and ordering through empower, distributors or sales

The following provides useful information about design logic driving the configurations in empower.

1. Interior configurations

Interior generated by bus type, material, panel rating and X space.

Possible combinations of bus stack and enclosures

Bus height	16X			24X			32X			40X			
	Bus type	NN	BL	BF	NN	BL	BF	NN	BL	BF	NN	BL	BF
Enclosure height (in.)													
60	•	•	•	•	•								
72		•	•		•	•	•	•	•				
84		•	•		•	•	•	•	•	•			
96					•	•		•	•			•	•

NN: clean bus, no lug pads
 BF: feedthrough, 2 sets of lug pads
 BL: bolted lug pad

2. Panel configurations

Once the main bus ampacity is determined, the height of the bus determines both the height of the panelboard and the maximum number of available outgoing branch Tmax XT, Record Plus® FB, TEY and Formula A2 circuit breaker X-spaces. Different circuit-breaker frame sizes require different numbers of mounting positions on the bus stack.

The bus stack can either be mounted in the center of the box or be offset to the right (default) or to the left. With an offset configuration, the maximum ampacity of the branch circuit breakers mounted on the narrow and wide sides is different. This allows the panelboard to comply with the wire-bending space requirements per UL 67.

Main lugs and main circuit breaker options are both available up to 1200 A. The main circuit breaker can be either vertically or horizontally mounted. For vertical circuit-breaker mounting, XT5 or XT7 mounting kits are required.

All ReliaGear neXT panelboards are double sided, with branch circuit breakers that can fit on both the left and right sides of the bus stack. The maximum ampacity of the circuit breakers selected will determine the width of the panelboard needed.

Available orientations

Panelboard width (in.)	Bus stack position inside the box	Max. branch circuit breaker ampacity on wide side (A)	Max. branch circuit breaker ampacity on narrow side (A)
30	Center	250 (XT4)	250 (XT4)
40	Offset	600 (XT5)	250 (XT4)
45	Center	600 (XT5)	600 (XT5)
45	Offset	1200 (XT7)	250 (XT4)

Horizontally mounted XT5 with 750 MCM lugs can fit only in 45" offset box
 250A for XT4 available on the narrow side only with 350 MCM internal lugs (breaker digit 12 = "8")

3. Enclosure configurations

empower defaults to smallest enclosure. Manually adjust by adding circuit breaker spaces.

Panelboard dimensions

H	60"	72"	84"	96"
A	16X	24X	32X	40X
W	-	30"	40"	45"
D	11" NEMA 1 14.5" NEMA 1 + DiD or drip hood ¹ 14.5" NEMA 2/3R ^{1,2} 14.8" NEMA 4/4X/12 ²			

¹ DiD and drip hood usable conduit space is 11".
² Depth for NEMA 3R/4/4X/12 does not include 0.9" of hanger bracket.

ReliaGear neXT panelboards

Pricing and ordering through empower, distributors or sales

4. Tmax XT main and feeder configuration

Select main circuit breaker kit appropriate for your application, amp rating and kAIC rating.

Combined with precise electronic trip units in small frames, the new range delivers significant time savings and enhances installation quality. Reliability is further increased, and speed of installation reduced, thanks to Bluetooth and Ekip connectivity for mobile devices. Tmax XT circuit breakers and their accessories are constructed in compliance with UL 489 and CSA C22.2 standards.

100% rated circuit breakers

All Tmax XT circuit breakers are available both as standard versions and as 100% rated versions. Because of the additional heat generated at 100% of continuous current rating, the use of specific 90 °C rated wires sized per 75 °C ampacity maybe required.

Frame	Max. ampacity (A)	Wires
XT4	200	75 °C
XT5	400	75 °C
XT6	600	75 °C
XT7	800	75 °C
XT7	1000/1200	90 °C

Tmax XT trip unit types

The first level of electronic trip units, Ekip DIP trip units, are based on microprocessor technologies and guarantee high reliability, protection adjustability and coordination.

They provide protection against overloads, selective short circuits, short circuits and ground faults. The power required for their operation is provided directly from the current sensors.

Field of application	Trip unit	L – overload protection	S – selective short-circuit protection		I – short-circuit protection

5. Select main and/or feeder circuit breaker – Record Plus FB, TEY and Formula A2

Record Plus FB, TEY and Formula A2 circuit breakers complete the circuit breakers offering for the ReliaGear neXT panelboard.

The Record Plus FB line features true one- and two-pole construction, has a double-break contact system for fast response and current limitation to help with arc flash and coordination. This non-adjustable thermal-magnetic circuit breaker up to 100 A offers four interrupt tiers — through 100 kA at 480 V AC and 35 kA at 600/347 V AC.

TEY also offers true one-pole construction up to 70A and two-pole construction up to 125A. This line offers non-adjustable thermal-magnetic trip units with three interrupt tiers - through 100 kA at 240 V AC and 65 kA at 480/277 V AC.

The Formula A2 line features true two-pole breaker construction from 125A to 250A. This line offers fixed (non-adjustable) thermal-magnetic trip units with two interrupt tiers - 10 kA and 25 kA at 240 V AC.

Record Plus FB

6. Mounting space requirements, accessories and connection options

For molded case circuit breakers

Each circuit breaker frame has specific requirements for the number of mounting positions (X-spaces). Thanks to the optimized dimensions of the XT1, the mounting positions required are lower when two or five circuit breakers are mounted close to one another. SPD, metering and RELT also

require X-space, since they are plug-in modules. Refer to the table below. In main lugs configuration, each set of lug pads occupies 4 X-spaces. A set of lug pads is needed also with a vertical main circuit breaker.

Frame	Max. ampacity (A)	Poles	X-spaces
Single XT1	125	3	3
Two XT1	125	3	5
Five XT1	125	3	11
XT4	250	3	3
XT5	600	3	4
XT6	800	3	6
XT7	1200	3	6
FB	100	1	1
FB	100	2	2
TEY	70	1	1
TEY	125	2	2
A2	250	2	2
SPD	-	-	10
RELT	-	-	3
Main metering	-	-	4
Submetering	-	-	9 / 14

Submetering

Empower selects the appropriate metering module based on:

- Number of metered breakers
- 2/3 pole breaker selection
- Voltage

Number of meters	Maximum number of 2 pole metered breakers ¹	Maximum number of 3 pole metered breakers	Maximum number of circuits	X-space required
1	6	4	12	9X
2	12	8	24	9X
3	18	12	36	14X
4	24	16	48	14X

¹ 2-pole available up to 240V

All modules include display for local monitoring

Available in 40" and 45" wide enclosures

For more information on submetering in ReliaGear neXT, refer to submetering brochure 15QC900005B0201

Each circuit breaker frame and current transformers in combination have specific requirements for the number of mounting positions (X-spaces).

Breaker frame	CT current rating (A)	Ampacity (A)	X-space required
XT1			3X
FB 2P	50	0-50	2X
TEY 2P			2X
XT1			3X
FB 2P	100	51-100	2X
TEY 2P			2X
TEY 2P		101-125	2X
A2	200	125-200	2X
XT4		101-200	3X
A2		201-250	4X
XT4	400		5X
XT5		250-400	4X
XT5		401-600	6X
XT6/XT7	800	601-800	6X
XT7	1200	801-1200	10X

ReliaGear neXT panelboards

Pricing and ordering through empower, distributors or sales

Line-side connectors

Each circuit breaker horizontally mounted on the bus stack is provided with a line-side connector (LSC) and a mounting bracket. The LSC is designed to ensure an easy and accurate connection between the circuit breakers and the conductive busbars. A patented clip design with a loaded spring ensures full contact in any circumstance. Each circuit breaker frame has a specific LSC with the right number of clips to ensure the highest performance.

Circuit breaker lugs offering

All ReliaGear neXT circuit breakers are provided with a set of lugs on the load side. All lugs accept either copper or aluminum wires.

Circuit breaker lugs

Frame	Ampacity (A)	Wire size (AWG or kcmil) Cu or Al	Number of cables per lug	Installation
XT1	125	#10-2/0	1	Horizontal
XT4	25-70	#14-1/0	1	Horizontal
XT4	80-225	#4-300	1	Horizontal
XT4	250	3/0-350	1	Horizontal
XT5	600	2/0-500	2	Horizontal/vertical
XT5	600	500-750 ²	2	Horizontal/vertical
XT6	800	2/0-400	3	Horizontal
XT6	800	500-750	2	Horizontal
XT7	1200	4/0-500	4	Horizontal/vertical
XT7	1200	500-750	2 ¹ /3	Horizontal/vertical
STEY	70-125	#4-2/0	1	Horizontal
FB	15-20	#14-#10	1	Horizontal
FB/TEY	25-60	#10-#4	1	Horizontal
FB/TEY	70-100	#1-1/0	1	Horizontal
A2	125-250	#1-250, 2/0-300	1	Horizontal
A2	250	350 (Al)	1	Horizontal

¹ Max. two 750 kcmil cables allowed in horizontal installation due to wire-bending space limitation.

² XT5 with 750 kcmil lugs must go in 45" offset enclosure

Internal accessories

Common internal accessories (shunt trips, undervoltage releases, auxiliary switches, etc.) are available in common voltage ratings and are UL listed for field assembly.

Auxiliary contacts — AUX

The SACE Tmax XT, Record Plus FB, TEY and Formula A2 circuit breakers can be equipped with auxiliary contacts that signal the status of the circuit breaker and can be routed outside the circuit breaker itself. The following information is available:

- Open/closed (Q): indication of the status of the circuit-breaker power contacts
- Options for 1 or 2 aux on XT1-XT4-XT5-XT6; 4 aux on XT7; 1 aux on 2-pole FB and TEY, and 2 aux on A2
- Trip (SY): signals that the circuit breaker is opening due to the intervention of the trip unit, or to the opening of undervoltage/shunt opening releases, or to the use of the test button

Shunt opening release — SOR/YO

This allows the circuit breaker to open by means of a non-permanent electrical control. Release operation is guaranteed for voltage between 70% and 110% of the rated power supply voltage (Un), in both alternating and direct current. The SOR is equipped with a built-in limit contact to shut off the power supply in the open position with the trip unit tripped. A remote-controlled emergency opening command can be generated by connecting an opening button to the SOR.

Frame	Voltage		
XT1-XT4-XT5-XT6	24-30 V AC/DC	110-127 V AC/ 110-125 V DC	220-240 V AC/ 220-250 V DC
XT7	24 V AC/DC	110-120 V AC	220-240 V AC
FB (2-pole only)	24 V AC/DC	110-130 V AC 110-125 V DC	220-240 V AC/ 250 V DC
TEY (2-pole only)	24V AC	120V AC	240V AC
A2	-	110-127 V AC/ 110-125 V DC	-

ReliaGear neXT panelboards

Pricing and ordering through empower, distributors or sales

Undervoltage release — UVR/YU

This allows the circuit breaker to open when the release is subject either to a power failure or a voltage drop. As prescribed in the standards, opening is guaranteed when the voltage is between 70% to 35% Un. After tripping, the circuit breaker can be closed again if the voltage exceeds 85% of Un. When the undervoltage release is not energized, neither the circuit breaker nor the main contacts can be closed. A remote-controlled emergency opening command can be generated by connecting an opening button to the UVR.

Frame	Voltage		
XT1–XT4–XT5 -XT6	24–30 V AC/DC	110–127 V AC/ 110–125 V DC	220–240 V AC/ 220–250 V DC
XT7	24 V AC/DC	110–120 V AC	220–240 V AC
FB (2-pole only)	24 V AC/DC	110–130 V AC/ 110–125 V DC	220–240 V AC/ 250 V DC

Padlocks and key locks

Padlocks or key locks prevent the circuit breaker from being closed and/or opened. Maximum number of padlocks (PLL) and maximum stem dimensions are the following:

Frame	Padlocks ¹	Stem min.-max.
XT1–XT4	3	Ø 0.24"-0.275" / Ø 6-7 mm
XT5–XT7	3	Ø 0.24-0.315" / Ø 6-8 mm
XT6	3	Ø 0.20-0.31" / Ø 5-8 mm
FB / TEY	1	Ø 0.25" / Ø 6.35 mm
A2	3	Ø 0.24-0.275" / Ø 6-7 mm

¹Padlocks are not included in the kits.

Multiple models of keylock provisions are offered: Kirk KCAM00010 / KCAM00010S (XT5–XT7), Ronis 1228 (XT1–XT4–XT5–XT7) and Castell (XT7). Kirk and Castell locks are at customer expense and not provided in the kit. Two options are available for Ronis: same keys (type A) and different keys. This allows the customer to create interlocking logics.

Internal modules

Available with several different communication protocols, the Ekip Com internal module is installed directly inside the circuit breaker. It allows the circuit breaker to be integrated in a communication network for supervision and control. Ekip Com internal modules can be used for XT4 and XT5. They can be connected to the trip unit when Ekip Touch is used.

Protocols supported include:

- Modbus RTU
- Modbus TCP/IP
- Profinet
- EthernNet/IP
- IEC 61850

Cartridge modules

Cartridge Ekip Com modules, along with the internal modules, allow integration in any communication network. They can be used only on the XT7 circuit breaker equipped with an Ekip Touch/Hi-Touch trip unit, mounted directly on the terminal box. Several modules can be used

simultaneously, enabling systems with different protocols. Modbus RTU, Profibus-DP and DeviceNet modules contain a terminating resistor and two DIP switches for optional activation to terminate the serial network or bus. The Profibus-DP module also contains a polarization resistor and two DIP switches for its activation.

- Modbus RTU
- Modbus TCP/IP
- Profinet
- Profibus
- EthernNet/IP
- DeviceNet
- IEC 61850

Ekip Com hub

The Ekip Com hub is the new communication module for cloud connectivity. A circuit breaker equipped with the Ekip Com hub can establish a connection with the ABB Ability Electrical Distribution Control System (EDCS) for the low-voltage power distribution panel. This dedicated module is available for the XT7 circuit breaker even when other modules are present.

For further information on ABB Ability EDCS, please visit new.abb.com/low-voltage/launches/abb-ability-edcs.

Signalling modules

The Ekip 2K signalling cartridge modules, available for XT7, supply two input and two output contacts for control and remote signalling of alarms and circuit breaker trips.

The Ekip 1K signalling module, available for the XT5, supplies one input contact and one output contact for control and remote signalling. It is installed inside the circuit breaker in the housing provided on the left down side of the circuit breaker and can be used when an Ekip Touch/Hi-Touch trip unit is present.

Ekip signalling modules can be programmed from the trip unit display or via the Ekip Connect software and app. When using Ekip Connect, combinations of events can be freely configured.

Ekip power supply

The Ekip power supply module supplies all Ekip trip units and modules present on the XT7 with several auxiliary power sources (in AC or DC). The cartridge module permits the installation of other advanced modules. It can be field installed at any time. Two versions are available according to the control voltage:

- Ekip supply 110–240 V AC/DC
- Ekip supply 24–48 V DC

This module is always needed with any Ekip Com module or the signalling 2K module.

Main lugs – mechanical

LG ML2 75 A

Part identifier

LG = Main lug

Material

A = Aluminum
C = Copper

Lug type and number of wires

ML2 = Standard mechanical 2 wire lug

Wire size

60 = 600 MCM
75 = 750 MCM

Note: * Each catalog contains a single lug. The quantity should be multiplied by the number of phases (2X for single phase, 3X for 3 phase, and the quantity is doubled if feedthrough is needed). Also, this total quantity should be multiplied by 2 if there are 2 lugs needed per phase.

ReliaGear neXT catalog number nomenclature

Main lugs – compression

LG **CL** **2** **75** **A**

Part identifier

LG = Main lug

Lug type

CL = Compression standard

Number of wires

- 1 = 1 wire lug
- 2 = 2 wire lug
- 4 = 4 wire lug

Material

A = Aluminum

Wire size

01 = 1/0	30 = 350 MCM
02 = 2/0	40 = 400 MCM
03 = 3/0	50 = 500 MCM
04 = 4/0	60 = 600 MCM
25 = 250 MCM	75 = 750 MCM

Note: * Each catalog generally contains the lugs for a single phase. The quantity should be multiplied by the number of phases (2X for single phase, 3X for 3 phase, and the quantity is doubled if feedthrough is needed).

Main lugs – dual

LG **M** **D** **4** **75** **A**

Part identifier

LG = Main lug

Lug type

- M = Mechanical
- C = Compression

Configuration

- D = Dual main, 3 phase, silver plated
- P = Dual main, 1 phase, silver plated
- T = Dual main, 3 phase, tin plated
- S = Dual main, 1 phase, tin plated

Material

- A = Aluminum
- C = Copper

Wire size

25 = 250 MCM	50 = 500 MCM
30 = 350 MCM	60 = 600 MCM
40 = 400 MCM	75 = 750 MCM

Number of wires

4 = 4 wire lug

Note: * Each catalog contains all lugs/components needed for dual main lugs. Quantity should always be 1.

Replacement parts

RGRP **RGRS**

Part identifier

RGRP = ReliaGear replacement parts

Note: For additional information, please refer to the replacement parts instruction sheet 15QC900015M0201

Replacement part type

- RGRS = Rheolube 368 50ml - clip grease - 1pc
Grease used to apply on breaker clips to plug into bus stack

- DPIN = Door hinge pins - 6pcs
Door hinge pins used to secure gutter doors and standard locking doors to enclosure

- TSCR = 1/4-20 thread-forming screws - 20pcs
Standard panel screws that come in two lengths, qty 10 of 3/8", qty 10 of 1.25"

- SKEY = Standard C135 key - DID and SLD - 1pc
Standard key for door within door and standard locking doors

ReliaGear neXT OEM power panelboards

Codes and standards application information

Your customers have unique requirements that get passed to you. ABB partners with you to make sure the end results satisfy both. Choose your level of support from ABB — your design, your business defines the model.

**Option 1 — Maximum ABB support**

You purchase everything from ABB. Everything is UL listed or recognized and provided for you to assemble into assemblies at your convenience. No UL file extensions to obtain, no design work required.

**Option 2 — Minimum ABB support**

You purchase the bus stack and plug-in circuit breakers from ABB and install them into an assembly of your design. ABB's UL listed/recognized components are available to be incorporated into your design and your UL file. Your product, built on ABB's neXT plug-in technology, can be as unique as you are.

**Option 3 — You decide**

You decide the level of design ownership and fabrication that works for you.

If sheet metal design is your strong suit, you can design your own enclosures, use ABB fillers and frames with the bus stack and circuit breakers and provide a semi-custom solution.

If you would like to fabricate but not design, you can fabricate the ABB design in your own shop for as much vertical integration as you need. In this case, the UL file extension is needed.

ReliaGear neXT OEM power panelboards Standards

ReliaGear distribution panelboards are designed, tested and constructed in accordance with the following industry standards:

- Underwriters Laboratories UL®: UL 67, File # E2366
- Canadian Standards Association (CSA®): CSA C22.2 No. 29

ReliaGear switchboard interiors are designed, tested and constructed in accordance with the following industry standards:

- Underwriters Laboratories UL®: UL 891, File # E466042
- Canadian Standards Association (CSA®): CSA C22.2 No. 244

ABB UL file extension process overview

1**Step 1**

ABB has designed and tested switchboard and panelboard solutions in accordance with the above UL files using the ABB molded case circuit breaker families Tmax XT, Record Plus FB and TEY.

2**Step 2**

OEM to submit a file extension request to UL/CSA referencing the appropriate UL file from the above list.

3**Step 3**

ABB to review and approve file extension request with UL/CSA. OEM will be listed as an approved assembler in ABB file.

4**Step 4**

OEM to obtain any required component drawings from ABB.com.

- Drawings of circuit breaker assemblies, interiors and other components
- STP files of circuit breaker assemblies, interiors and other components
- Assembly instructions with torque values
- Video installation manuals

5**Step 5**

The OEM purchases bus stacks and circuit breaker assemblies and has the option to build the sheet metal required for installation.

ReliaGear neXT OEM power panelboards

Product design and selection

Getting started

Would you like to build UL 67 and UL 891 distribution products with ABB's ReliaGear design? Wondering where to begin? ABB has tools to support you in this journey. ReliaGear components are catalog number driven, and ABB has configurators that help get you started.

**1****Step 1**

Compile pertinent information about the lineup or section such as incoming service, voltage, panel ampacity and main/feeder information.

2**Step 2**

Use the Quote feature of empower.abb.com to configure a panelboard or switchboard. If you have a panel schedule, you can use the "panel scan" feature of empower for quick entry and configuration. Once configured in the quote feature of empower.abb.com, navigate to the BOM or Drawing tabs to retrieve information such as standard enclosure dimensions, frame mounting locations and a list of catalog numbers in the BOM.

3**Step 3**

Navigate to the Flow feature of empower.com, or the empower home screen. Use the catalog numbers from the BOM to enter an order for the components you require.

4**Step 4**

Navigate to <http://reliagear-drawingselector.com/>. Download any required STP models.

5**Step 5**

Ensure that codes and standards requirements are met. Purchase ReliaGear components from ABB. Begin assembly.
